

HEAT. STEP. AHH!

Make custom insoles in minutes—with only a microwave oven! The **ZAPZ** Foot Support System contours precisely to feet and improves performance and comfort in all footwear. **ZAPZ** provide the fit and performance of custom insoles costing up to five times more.

1 Anti-Microbial Topcover

Friction-fighting Etc.[®] reduces blistering and odors and wicks away moisture.

2 InstaForm Molding Gel ARCH

The Heart of the Zapz Support System! InstaForm Molding Gel[®] lets **ZAPZ** contour precisely to the natural shape of the arch, the foot's key control zone. When microwaved, the Gel softens. Excess Gel then exhausts into the Flow Domes, stabilizing the foot to dramatically reduce foot, knee and back pain.

3 Interlocking Cradle Support

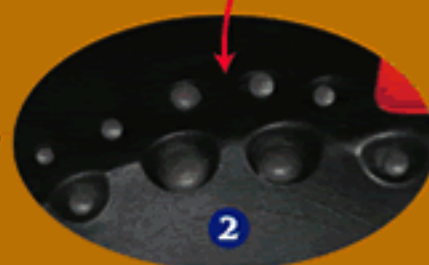

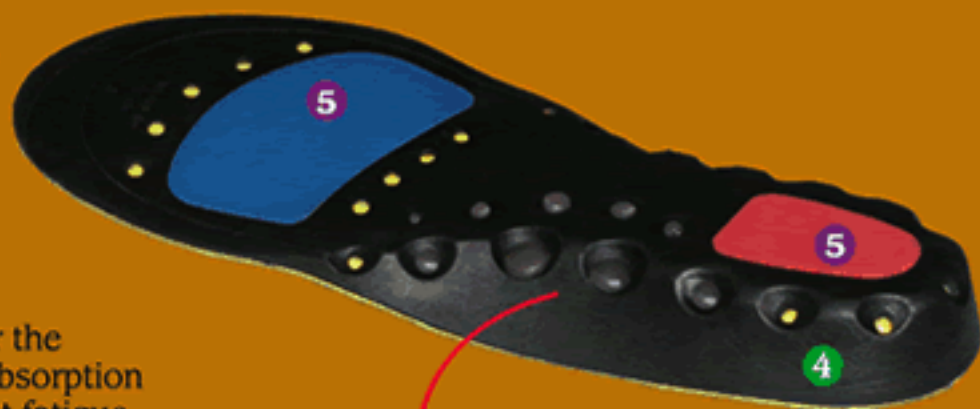

Twin Support Cradles are bonded together to boost comfort and support. The Upper Cradle is soft to cushion the foot surface. The Lower Cradle is firm to provide crisp energy transfer, enhance balance and improve body alignment.

4 Deep Cradle Heel and Volume Compensation Domes

Volume Compensation Domes molded into the perimeter of the Deep Cradle Heel stabilize the foot by auto-contouring to any shape heel from ultra-narrow to super-wide.

5 Anti-Shock Platforms

Poron[®] Performance Urethane inserts under the heel and forefoot provide excellent shock-absorption during heel strike and toe-off to prevent foot fatigue.

InstaForm Molding Gel fills the Flow Domes during molding to perfectly mirror arch shape!

Microwavable Custom Insoles for All Sports
